
SMART link

SMART beam – remote controller with infrared waves (IR)

SMART beam - the ability to change power settings and profiles by reducing wave infrared (IR)

Application:

- Possible control of each luminaire in the power setting and time reduction
- No need to use the lift to change to Profile reduction
- The ability to transmit data without the need for infrastructure construction ICT (use of the transmitter and receiver wave IR)
- Range up to 30m
- Selectivity angle of 15°
- Very small dimensions
- Ease of use
- Low price implementation
